

# BODY-WORN CAMERA SERVICES

*PRISM partners with the industry's best to provide services that are second to none.*

PRISM has partnered with LensLock, Inc. to provide a state of the art, turnkey body-worn camera (BWC) program aimed at ensuring digital video & data captured by law enforcement agencies is safely maintained in a Microsoft Azure CJIS compliant Government Cloud solution.

## Services Include

- Data Storage - gather, maintain, and store digital evidence with a secure chain of custody.
- Data Management - suite of products and services tailored to meet end customer needs.
- Body Cams - top camera manufacturers in the industry with the highest quality and most advanced features.

To get started, please contact:  
Sean O'Grady, Sales Representative

### Secure Cloud-Based Storage

Ensures easy, 24/7 access.

### Easy Metadata Tagging

Allows for efficient utilization of digital evidence.

### Discounted Pricing

Turnkey, discounted packages take the guesswork out of the budgeting process by including unlimited data storage.

## Quick Start Steps

1. Ensure your agency has a comprehensive, compliant and functional policy for body-worn camera (BWC) use, including retention. If not, PRISM can help.
2. Contact Sean and discuss the optional, no cost, 60-day pilot program.
3. Determine who at your agency will be responsible for the administration of the agency's BWC program. This individual is also responsible for creating user accounts, resetting passwords and generating reports on system activities.
4. Discuss with LensLock which type of hardware (camera and docking station) will work for your agency.
5. Ensure you have internet speed fast enough to facilitate data transfer to the cloud.
6. Provide data for each end-user (name, primary location, email address, supervisor, system access level, quad number, etc.)
7. LensLock will provide on-site implementation support and training for end-users.
